

Capturex Butane

Flag 1

First, we use `sudo nmap -sU` for User datagram protocol scan. `--min-rate 5000` is to accelerate the scanning process.

```
(kali㉿kali)-[~]  
$ sudo nmap -sU --min-rate 5000 -p 1-65535 192.168.8.131  
  
Starting Nmap 7.92 ( https://nmap.org ) at 2023-10-27 00:55 EDT  
Nmap scan report for 192.168.8.131  
Host is up (0.0010s latency).  
Not shown: 65534 open|filtered udp ports (no-response)  
PORT      STATE SERVICE  
161/udp   open  snmp  
  
Nmap done: 1 IP address (1 host up) scanned in 40.69 seconds
```

We found the a snmp server which we refer to this link to find info about snmp.

<https://book.hacktricks.xyz/network-services-pentesting/pentesting-snmp>

```
snmpwalk -v X -c public <IP> NET-SNMP-EXTEND-MIB::nsExtendOutputFull
```

- ``snmpwalk``: This is the command itself, which is used to perform SNMP Walk operations.
- ``-v X``: This flag specifies the SNMP version to use. The "X" should be replaced with a specific SNMP version number, such as "1" or "2c." For example, to use SNMP version 2c, you would use ``-v 2c``.
- ``-c public``: The default community string "public" is often used for read-only access.

```
(kali㉿kali)-[~]  
$ snmpwalk -v 2c -c public 192.168.8.131  
iso.3.6.1.2.1.1.1.0 = STRING: "Linux butane 4.4.0-62-generic #83-Ubuntu SMP Wed Jan 18 14:10:15 UTC 2017 x86_64"
